
TECHNICAL DATA SHEET

MCW Timber Range - Ceiling Slats

MCW Timber Ceiling Slats are designed to reduce noise levels from speech, music, and other sound events. By decreasing sound reverberation within a space, these acoustic wood panels prevent sound transmission to adjoining rooms.

With a wide range of surface options and finishes available, designers can easily customize the visual aesthetic and overall feel of any interior.

Key Benefits

- Up to Class A sound absorption (depending on perforation profile and panel thickness)
- Multiple panel thicknesses to suit project specifications
- Extensive choice of colors, veneers, and surface finishes

Applications

MCW Timber Ceiling Slats are ideally suited for public and commercial venues, including conference rooms, atriums, concert halls, and auditoriums.
