

TECHNICAL DATA SHEET

MCW Lay-in Metal Ceiling Tiles

VERSATILE MODULAR SUSPENDED CEILING SOLUTION

The Lay-In Metal Ceiling System is a highly versatile, modular suspended ceiling solution engineered for modern architectural spaces. Designed to integrate seamlessly with standard exposed T-grid suspension systems, it features lightweight, durable metal panels that rest securely within the grid framework. The system offers a clean, uniform aesthetic while ensuring complete and effortless access to the ceiling plenum for the maintenance of HVAC, electrical, and plumbing infrastructure.

Key Features

- Complete Accessibility
- instant access to the overhead maintenance
- Easy integration of standard lighting fixtures, air conditioning diffusers, and fire sprinkler systems.
- Available variety of dimensions, materials, and perforation patterns
- Utilizes industry-standard T-Grid suspension installation methods
- Absorption Class A*

Perforation & Acoustic Styles

- Standard Perforation : $\Phi 1.8\text{mm} \times 20\%$
- Scaled to fit standard panel modules, 600x600mm (other sizes available)
- None perforated available on request

*Class A achieved by adding an acoustic pad behind the tile. Class C is achieved as standard with acoustic infill.
