

TECHNICAL DATA SHEET

MCW Open Cell Ceiling Tiles

LAY-IN METAL OPEN CELL CEILING SYSTEM

The MCW Open Ceiling Tile System is a modular, lay-in metal ceiling solution designed to provide a clean architectural finish while maintaining open airflow and access to building services within the ceiling void.

Key Features

- Lay-in installation onto exposed T-grid suspension systems
- Open-cell / egg-crate ceiling construction
- Lightweight metal panel design
- Removable panels for access to the ceiling void
- Suitable for integration with building services
- Powder-coated finishes available in a range of colours
- Tile openings size 150mm x 150mm square to fit standard 600mm x 600mm

The system comprises lightweight metal open-cell ceiling panels designed to install into a conventional exposed T-grid suspension system. The removable lay-in format allows straightforward installation, inspection and maintenance, making the system suitable for commercial, retail, transport, hospitality and other high-traffic environments.

The open-cell construction provides a visually open ceiling plane, allowing integration with lighting, ventilation, sprinklers, speakers and other mechanical and electrical services.

Typical Applications

- Commercial offices
- Retail units and shopping centres
- Airports and transport stations
- Leisure facilities
- Conference and exhibition centres
- Reception areas and circulation spaces
